

Can solar power be used for heating

Overview

Solar panels convert sunlight into electricity, which can then be used to run your household appliances, including heating systems. This can take several forms: Powering a heat pump that extracts heat from the air, ground, or water. Supplying an electric boiler or immersion heater. Active solar heating systems use solar energy to heat a fluid -- either liquid or air -- and then transfer the solar heat directly to the interior space or to a storage system for later use. If the solar system cannot provide adequate space heating, an auxiliary or back-up system provides the. Solar heating utilizes the energy stored in solar panels to power your home's air and water heating systems. But not in the way you might think. The short answer is yes, solar panels can heat a house. It involves two distinct technologies with different price tags and efficiencies.
