

How UAE telecom sites reduced carbon footprint with solar

Overview

In line with the UAE's Net Zero by 2050 strategy, du has decreased its carbon emissions by 8.6 KtCO₂ through various innovations. These include the deployment of 169 solar-powered telecom sites and the optimisation of an AI-powered cooling system. By utilising AI for RAN optimisation, du has. The innovation addresses the challenge of limited space at mobile sites by installing solar panels on monopole towers, enabling the solarization of hundreds of sites within Dubai. The Solar on Tower solution, patented invention by du, is an innovative and seamlessly integrated solution developed. With a focus on reducing energy consumption and carbon dioxide emissions across a range of industries, the UAE's 6G Roadmap is in perfect alignment with global sustainability goals. Effective green communication entails creating plans for a stable and continuous reduction in carbon emissions rather. Dubai: du has won three major sustainability awards recognising its AI-powered carbon reduction and circular economy efforts, including 169 solar sites cutting 8.
