

How to distinguish JA Solar's photovoltaic panels

Overview

JA Solar Panel is mainly divided into three categories: monocrystalline silicon panels, polycrystalline silicon panels, and thin-film panels. Each type of panel has its own unique characteristics and applicable scenarios. JA SOLAR stands for durable, high-performance PV modules that generate first-class energy yields. With our broad product portfolio, we offer sustainable and innovative solutions for residential, commercial and utility projects. With this system, DC electricity is converted into AC by an inverter and monitored by a meter box. The generated electricity can be used by the household or sold. JA Solar is one of the world's most trusted photovoltaic manufacturers—ranked consistently among the top three globally by shipment volume and recognized for high-efficiency monocrystalline modules, robust reliability, and competitive pricing.
