

# How to install five layers of solar photovoltaic panels

## Overview

The installer (or a dedicated surveyor) should always make sure the roof is strong enough before proceeding with a solar panel installation. How they'll do this depends on the type of roof, but it usually leads to a positive conclusion. Most modern roofs can hold much heavier objects than solar panels – such as people –. Despite being intricate bits of kit that can generate electricity from the sun, solar panels are pretty straightforward for a professional to set up. Before an installer is able to crack on with the actual installation, a professional surveyor will need to go into your loft. Solar panel installations typically take about two days to complete. Most of this time is taken up by constructing the scaffolding, which means if you're not installing your panels onto. Largely, you won't need planning permission to install solar panels, but there are exceptions. If you live in a listed building or live in a. Technically, yes, you can install solar panels on your own– but we strongly discourage you from doing so, unless you're a certified installer. You'll need expertise in roofing and.
