

Series use of solar panels

Overview

This section will go into more depth on series, parallel and series-parallel connections of solar panels. The purpose of this section is to explain why certain connections are utilized, how to set up to your desired. Strictly parallel connections are mostly utilized in smaller, more basic systems, and usually with PWM Controllers, although they are exceptions. Connecting your panels in parallel. Strictly series connections are mostly utilized in smaller systems with an MPPT Controller. Connecting your panels in series will increase the voltage level and keep the amperage the same. Solar Panel arrays are usually limited by one factor, the charge controller. Charge controllers are only designed to accept a certain amount of amperage and voltage. Often times for 1A. The total current, voltage, and power vary specific to the connection mode. To sum up: 1. Series Connection: Current stays constant, voltage adds up. 2. Parallel Connection: Voltage stays constant, current adds up.
