

Uninterruptible power supply cannot detect battery

Overview

Fault Analysis: This indicates a fault in the battery or charging circuit. The following steps can be used to check: A. If the charging circuit input is normal but the output is not, disconnect the. Regular maintenance and effective troubleshooting are essential for ensuring your Uninterruptible Power Supply (UPS) operates reliably. A well-maintained UPS prevents unexpected failures, extends battery life, and protects critical equipment from power disruptions. Secure Power offers comprehensive. Windows 11 does not recognize the UPS as a battery, meaning it does not show up in the taskbar, battery-related settings in the power plan (processor power management) have no effect once the APC loses line power, and BatteryInfoView shows completely no information about the battery. However, these devices also suffer from common problems throughout their lifespans. But don't despair! A "battery not detected" error doesn't. Some common UPS problems you'll likely troubleshoot are a lack of output from the battery, a battery that doesn't charge, a battery that discharges despite being plugged into a wall socket, and continuous beeping.
